Project Name FitBuddy-AI fitness plan Generator using Gemini Models

Maximum Marks 5 Marks

Project Proposal (Proposed Solution) report

The proposal aims to develop FitBuddy, an AI-powered fitness plan generator that uses Gemini Models to create personalized and practical fitness plans. The system is intended to simplify fitness planning by considering a user's basic goals, preferences, and available resources, while providing structured recommendations in an easy-to-understand format.

Project Overview

Objective	The primary objective is to develop an AI-based fitness planning system that generates personalized workout and fitness guidance using Gemini Models.
Scope	The project covers user-input-based fitness plan generation, personalized recommendations, structured workout planning, and an interactive AI-assisted experience.

Problem Statement

Description	Many users find it difficult to create a suitable fitness routine because planning workouts can be confusing, time-consuming, and difficult to personalize.
Impact	A personalized AI-based planning approach can make fitness guidance easier to access, better organized, and more adaptable to different user goals and preferences.

Proposed Solution

Approach	Use Gemini Models to understand user requirements and generate a structured, personalized fitness plan based on the information provided by the user.
Key Features	• AI-generated personalized fitness plans. • Goal-based workout recommendations. • Easy-to-follow structured schedules. • User-friendly interaction with Gemini Models. • Ability to adapt recommendations based on updated user inputs.

Resource Requirements

Resource Type	Description	Specification / Allocation
Hardware	Computing Resources	Laptop/Desktop with internet connectivity; GPU optional for development
	Memory	Minimum 8 GB RAM recommended
	Storage	Adequate storage for project files, logs and development tools
Software	Programming / Framework	Python; suitable web/application framework as required
	AI Model	Gemini Models / Gemini API
	Libraries / Tools	Relevant Python libraries and API integration tools
	Development Environment	VS Code / PyCharm / Jupyter Notebook

Team Member and Assigned Work

Name	Assigned Work
Kaviya sree.T	Responsible for the FitBuddy AI fitness plan generation module: designing the user-input flow, preparing prompts for Gemini Models, integrating the generated fitness-plan output, testing the plan-generation workflow, and documenting the assigned module.

Expected Outcome

FitBuddy is expected to provide a simple AI-assisted way for users to obtain structured fitness plans from their stated goals and preferences. The project will demonstrate how Gemini Models can be integrated into an application to generate useful, personalized fitness-planning content.
